Detailed Forecast

Today
Scattered rain and snow showers. Some thunder is also possible. Mostly cloudy, with a temperature falling to around 37 by 5pm. West wind 10 to 15 mph, with gusts as high as 30 mph. Chance of precipitation is 50%. Little or no snow accumulation expected.

Tonight
Rain and snow showers. Some thunder is also possible. Low around 34. West wind 10 to 15 mph, with gusts as high as 30 mph. Chance of precipitation is 80%. New snow accumulation of less than one inch possible.

Monday
Scattered rain and snow showers, mainly before 11am. Partly sunny, with a high near 52. West wind around 15 mph, with gusts as high as 25 mph. Chance of precipitation is 30%. New snow accumulation of less than a half inch possible.

Monday Night
Partly cloudy, with a low around 35. West wind 5 to 10 mph, with gusts as high as 20 mph.

Tuesday
Sunny, with a high near 66. Calm wind becoming northwest around 5 mph in the afternoon.

Tuesday Night
Clear, with a low around 39.

Wednesday
Sunny, with a high near 70.

Wednesday Night
Mostly clear, with a low around 41.

Thursday
Sunny, with a high near 74.

Thursday Night
Mostly clear, with a low around 44.

Friday
Sunny, with a high near 76.

338 AM PDT Sun Jun 11 2017

...LAKE WIND ADVISORY REMAINS IN EFFECT FROM 1 PM THIS AFTERNOON
TO 8 PM PDT THIS EVENING...

* Lakes Affected: Tahoe, Donner, Fallen Leaf, Prosser and Boca.

* Winds Sunday: West-Southwest winds 10 to 20 mph. Gusts up to
  35 mph.

* Wave Heights on Lake Tahoe: 1 to 3 feet.

* Small boats, kayaks and paddle boards will be prone to
  capsizing and should remain off lake waters until conditions
  improve.

PRECAUTIONARY/PREPAREDNESS ACTIONS...

Check lake conditions before heading out and be prepared for a
sudden increase in winds and wave heights. Consider postponing
boating activities on the lake until a day with less wind.

...Storm to Bring Winter-Like Conditions Back to the Region
Today...

A strong storm dropping into the region will bring back winter-like
conditions today with high temperatures as much as 25 degrees
below normal. With rain and snow showers and breezy winds, the
temperatures will feel downright frigid for June, especially in
areas of overcast skies.

Overnight low temperatures in the Sierra could stay below
freezing for as many as 3 to 4 more nights. While most of the
lower valleys of western Nevada are not expected to experience
freezing early morning temperatures through Monday, lows in the
coldest valleys will fall into the mid-30s Monday morning.
Therefore, anyone with sensitive vegetation in the colder valleys
should take the necessary precautions.

Accumulating snow will be possible in the Sierra above 6000 feet
late today through early Monday morning, with 2-4 inches of snow
possible in the higher elevations above 7000 feet. In northeast
California, 4-8 inches is possible above 6500 feet, with a couple
inches down to 5500 to 6000 feet. Mountains in western Nevada
could also see several inches of snow accumulation, with up to an
inch for locations such as the Virginia City Highlands. With the
June sun angle, snow will melt off rapidly with impacts to
mountain passes likely to be short-lived or limited to the
overnight hours. However, even a short burst of accumulating snow
can cause a significant travel hazard, so slow down if you end up
in any snow showers.

Anyone planning outdoor activities today into Monday should be
prepared for cold temperatures, with the potential for
accumulating snow in the higher elevations during the overnight
hours.

Heavy Rain and Local Flooding Possible

Monsoonal thunderstorms will bring the threat of heavy rain and local flooding to the Intermountain West and Southern Plains Sunday. Heavy rain is also possible in parts of Florida. Drier weather will move into the East, while hot temperatures will be found from the Pacific Northwest to Central California and parts of Texas. Read More >

NATIONAL WEATHER SERVICE
NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Catastrophic and life-threatening flooding continues in southeastern Texas and portions of southwestern Louisiana from Harvey

Harvey has has now set a preliminary record, surpassing 50 inches for the greatest amount of measured single-storm rainfall for the continental US. Additional rainfall accumulations of 6 to 12 inches are expected to the north and east of Houston from far east Texas into southwestern Louisiana. This is producing devastating flooding. Numerous Flash Flood Warnings are in effect. Read More >

Cool and Dry in the East; Turning Stormy in the Northwest

Much cooler temperatures behind a cold front will bring a feeling of fall to the East Coast today. In addition, an active fall storm pattern developing in the Pacific Northwest this week will bring areas of heavy rain and high elevation snow. Northern California will benefit from rainfall this week that will aid firefighters given the recent large wildfires. Read More >

NATIONAL WEATHER SERVICE
NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Heavy Rain, Strong Winds For the Northeast and Mid-Atlantic Sunday and Monday

A strong coastal low pressure system, expected to absorb moisture from Tropical Storm Philippe, will bring heavy rain to the Northeast and Mid-Atlantic Sunday and Monday. Very heavy rainfall, flash flooding, wind gusts in excess of 40 mph and coastal flooding will all be possible. Colder air behind this storm may bring accumulating snow to the mountains of New England. Read More >
